

## Summary

Web developer with experience building, implementing, and maintaining a large network of websites in a corporate setting, and an ambition to learn and build applications from new ideas. Well rounded with front-end and back-end development, relational and non-relational databases, and version control.

## Experience

### **CareerCo**

Software Engineer

Staten Island, New York  
September 7, 2014 – Present

- Build, implement, and maintain new features for our large network of websites
- Developed and maintain a back-end admin which allows detailed customization and rapid deployment of new configurations for each of our website's result pages
- Built and maintain our E3 website which allows clients to access their candidate information, generate and download reports, invoices, and more
- Write and maintain a large number of scripts which allow us to send candidate information to our clients in real time using RESTful web services
- Maintain and create scripts to upload call recordings from our call centers to our clients in real time and batches

### **Royal Communications Consultants**

Junior Datacenter Technician (Intern)

New York, New York
