Summary

Web developer with experience building, implementing, and maintaining a large network of websites in a corporate setting, and an ambition to learn and build applications from new ideas. Well rounded with an understanding of front-end and back-end development, relational and non-relational databases, and version control.

Experience

CareerCo   Staten Island, New York
Software Engineer   September 2014 – Present

- Build, implement, and maintain new features for our large network of websites
- Developed and maintain a back-end admin which allows detailed customization and rapid deployment of new configurations for each of our website's result pages
- Built and maintain our E3 website which allows clients to access their candidate information, generate and download reports, invoices, and more
- Write and maintain a large number of scripts which allows integration with third party RESTful web services and APIs in order to send candidate information to clients in real time and batches
- Responsible for maintaining scripts to integrate with client TCPA compliance teams
- Agile development with 2-3 week sprints and daily scrums

Royal Communications Consultants   New York, New York
Junior Datacenter Technician (Intern)   May 2013 – December 2013

- Installed/decommissioned servers and network devices

Education

William Paterson University of New Jersey   Wayne, New Jersey
Bachelor of Science, Computer Science   Graduated May 2014

- Only student invited to the annual Computer Science Advisory Board Meeting in 2014 to present my Raspberry Pi LAMP server project which hosted my website
- Built a realtor website www.keyhomesolutions.net
- Developed a binary, hex, and decimal calculator app for Android
